Summary:

During the consolidation of HUTRR28-97 into HUT1.2, a mistake was made assigning "Background Controls" to 0x06 in the "Generic Device Controls Page" (0x06).

This had originally been assigned to 0x01 in [HUTRR31](#), and is clearly an error during the process of consolidation. Special thanks to Olivier Gay (Logitech) for finding and reporting this error.

No other usage has been assigned to 0x01 since the publishing of HUT1.2

Proposal:

- Correct the assignment of Background Controls to UsageId 0x01. UsageId 0x06 will be unassigned.
- Update HUT 1.2 to include the correction, and revise the version to 1.21.
 - While a 'regular' HUTRR should not require its own revision to the HUT, since this is correcting an error in a (recently) published document, I feel it is warranted.
